

## VISION INSURANCE

# Healthy eyes start with seeing your eye doctor each year.

### Quick facts

- ✓ The eye is made up of muscles, nerves and blood vessels
- ✓ There is a direct connection between the eye and the brain
- ✓ Many diseases that affect muscle, nerve and circulatory systems will show up in the eye

Through a dilated eye exam, eye doctors can look inside your eye. This may show early signs of chronic illnesses. These signs can be seen in the eyes before other parts of the body are affected. This lets treatment start early even before you know there is a problem. Eye doctors can help you find a primary care doctor to care for illnesses found during your exam. They are part of your team for ongoing care to watch for changes in your conditions.

- ✓ **Eye problems are the second most common health concern in the United States.**
- ✓ **Adults between 18 and 60 years of age should get an exam every one to two years.<sup>1</sup>**
- ✓ **Illnesses such as diabetes or hypertension as well as a family history of eye illnesses like glaucoma can raise your chances of having vision problems.**

### Annual exams help detect and monitor:

- ✓ Vision disorders (i.e. nearsighted, farsighted)
- ✓ Eye muscle coordination
- ✓ Eye diseases<sup>2</sup>
- ✓ Warning signs or early identification of health conditions<sup>2</sup>

## Schedule a comprehensive eye exam for you and your family today!

# Your symptoms could indicate something more.

If you have headaches, eye strain or blurry vision a new eyeglass prescription could help. These issues could also be signs of more serious problems. Many medications can cause eye side effects. The only way to know for sure is to have a yearly eye exam.

## Chronic conditions that may be found include:

- ✓ Arcus
- ✓ Cataract
- ✓ Crohn's Disease
- ✓ Cytomegalovirus
- ✓ Diabetes
- ✓ Diabetic Retinopathy
- ✓ Glaucoma
